

Making a Pyramid Lantern

Stage 1: Creating Your Structure

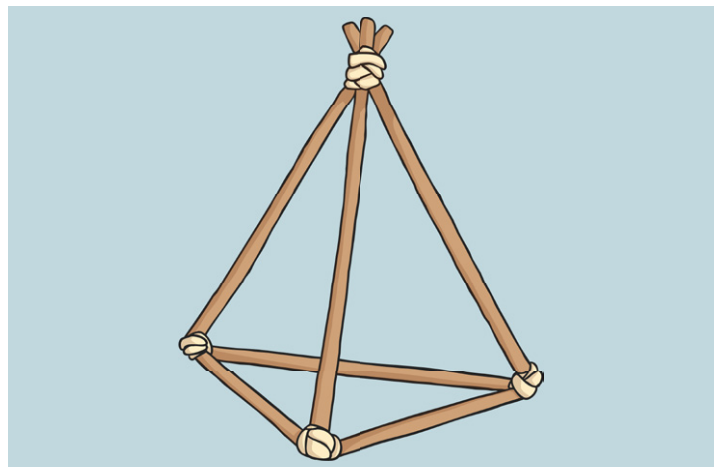

Step 1

Make a tripod with the withies and bind in place with tape.

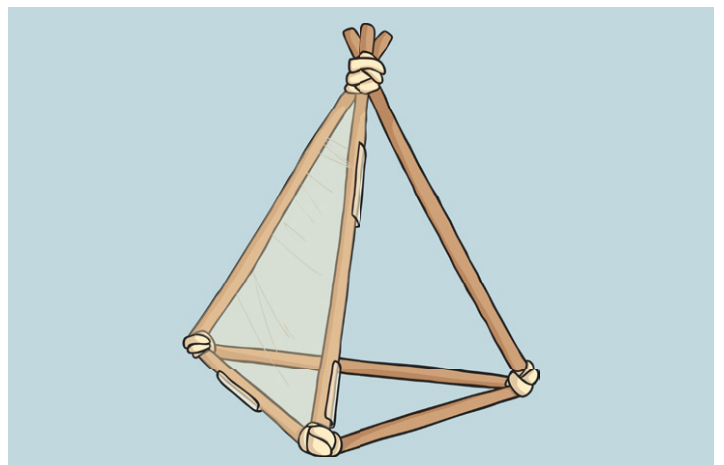

Step 2

Create a base to the tripod with three more withies and bind at the corners.

Step 3

Once everything is secure and taped, add a cling film layer on top.

Stage 2: Covering Your Structure

Step 1

Tear small squares of white tissue paper. These need to be about 5cm square.

Step 2

Paste a patch of glue onto your cling film covered model and stick a square of tissue paper onto the patch. Paste over this patch with more of your glue solution. This makes sure that the square is stuck firmly and also gives it a glossy finish once dried.

Step 3

Keep sticking on squares until your structure is fully covered.

Step 4

Cut out seaside designs from coloured tissue papers. These could be anything you like such as fish, seaweed, starfish or waves!

Step 5

Paste a patch of glue onto your tissue covered model and stick one of your seaside tissue designs onto the patch. Paste over your design with more of your glue solution.

Step 6

Keep sticking until your designs are all stuck on.

Step 7

Once your lantern has dried, you will need to make a hole big enough to insert your light. Carefully use scissors to cut a small hole and push your light inside.

Step 8

Your lantern is finished! Why not have a parade to show off your work?
